# The Vicinity Whiteboard Paint System

**Vicinity has created a high quality, 4-part whiteboard paint system that allows contractors to easily execute large areas of whiteboard paint.**

There are various whiteboard paint solutions in the market, but most do not include the specific components needed for lasting and reliable results. Vicinity's standardised whiteboard paint system provides a simple all-in-one solution for consistent results for the professional applicator.

# WHITEBOARD PAINT

## Simple Application For Large And Small Projects

**Our product is commercial grade and designed for intensive use environments on large-scale projects.**

The single-coat paint application gives optimal hardening and resistance to whiteboard markers.

Our whiteboard paint is:

- Easy to apply
- High coverage
- Environmentally friendly (low VOC)
- Low on labour costs
- High erasability index

Vicinity whiteboard paint is available in white and clear options, and gives you 6m<sup>2</sup> of coverage per litre.

# WALL PREPARATION

## Vicinity Universal Undercoat

**The preparation undercoat is applied onto a primed surface or over an existing coat of paint. The undercoat makes the wall white and ready to receive the whiteboard paint.**

Safety first! Our water-based, zero VOC undercoat doesn't give off dangerous or unpleasant fumes, so clients and contractors are not affected. The products can be installed during the day in a working office.

Preparing the wall with Vicinity undercoat prevents any compatibility issues with local paint products in your country.

# Vicinity Whiteboard Paint Application Kit

**Our kit includes the optimal equipment for a smooth and long-lasting application.**

We specify and supply application equipment to ensure that results are of consistent quality everywhere in the world.

- **Using the right roller:** Long- and short-hair rollers give different application consistency, affecting the result. Our roller ensures the coats are applied at the correct thickness, ensuring longevity of the whiteboard application.
- **Aerated stir stick:** A specific consistency is required when mixing the 2-part whiteboard paint. Mixing the paint with the correct tools improves consistency of the application.
- **New, clean equipment for each job:** A clean set of tools improves your results. Our kit makes it easy to get the job right the first time.

APPLICATION EQUIPMENT

# Vicinity Accessory Sets

**We encourage contractors to supply starter kits with the correct pens and cleaning equipment to improve the client's first experience and product adoption.**

- **High-quality whiteboard markers:** With better ink formulation, removal is simpler even after a long period on the wall. These pens do not stain like cheaper variations would.
- **Microfibre cleaning cloths:** Designed specifically to remove whiteboard marker ink from textured, painted surfaces. Using standard dusters or abrasive cleaners will not work effectively and could damage the whiteboard paint.
- **Water-based spray cleaner:** Our eco-friendly whiteboard cleaner is non-toxic, non-flammable and makes the removal of stubborn ink an easy task.
