

Vicinity Greenwall Lighting

VICINITY

Vicinity has been designing and supplying vertical garden technology for indoor vertical gardens for years.

A common problem for landscapers is designing lighting solutions that give the right amount of quality light for indoor plants. It is difficult to get the right advice, and to source affordable, aesthetically pleasing grow lights.

The market is moving away from metal halide spot lights as they run hot, and they are not energy efficient.

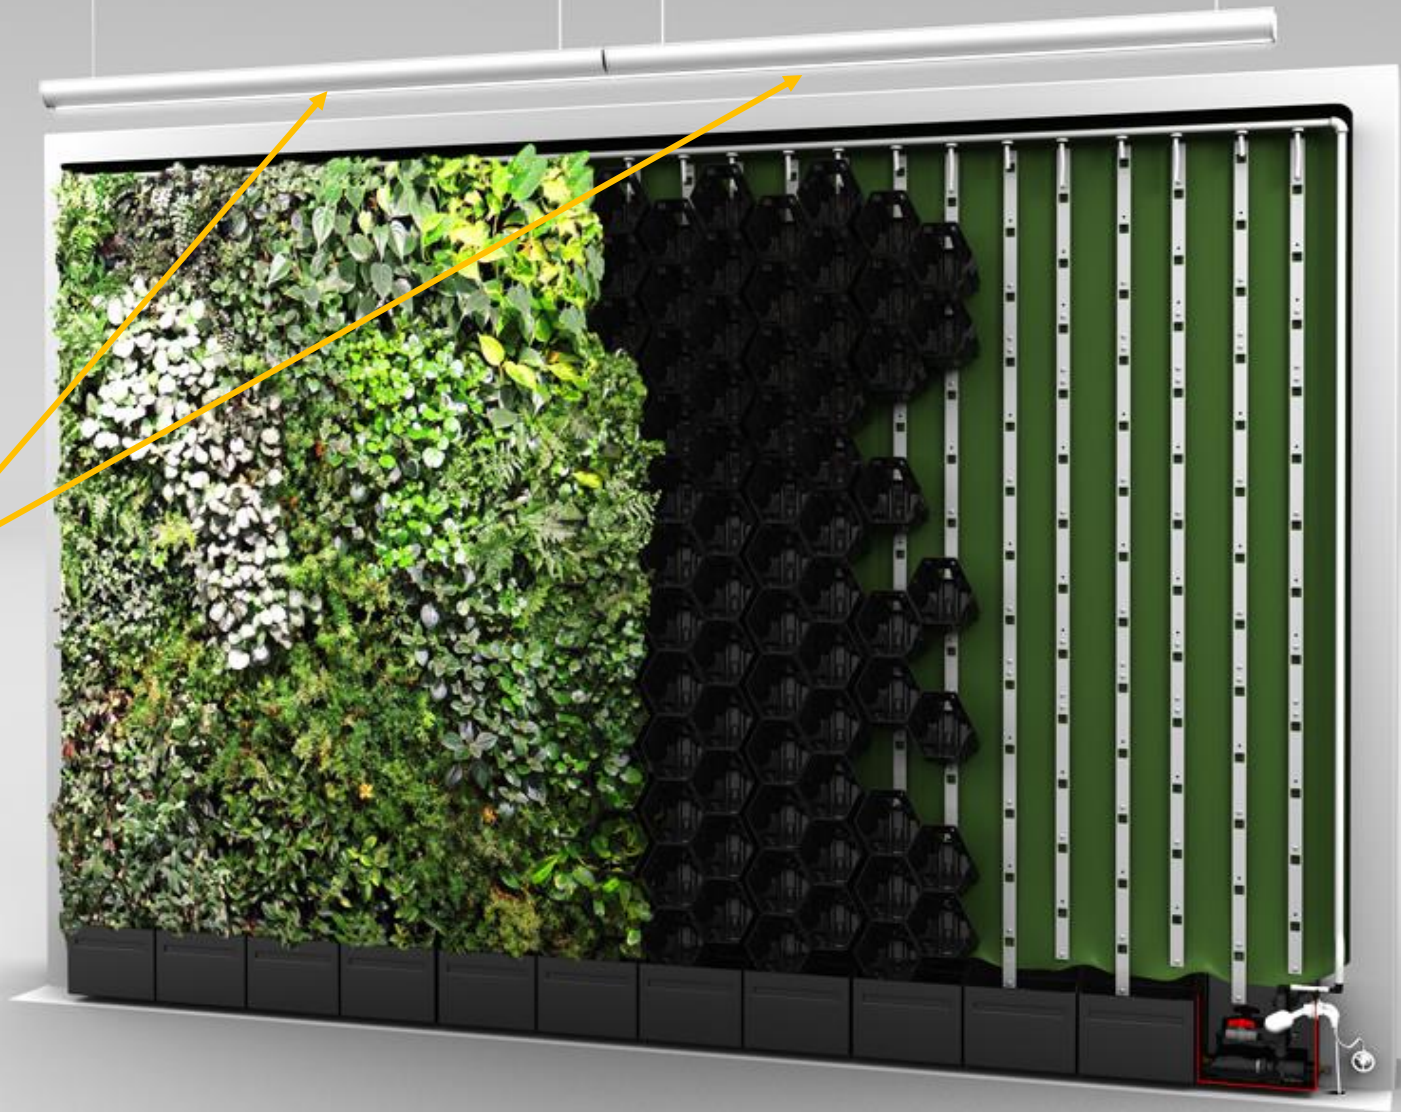

Vicinity has developed a custom LED lighting solution to meet the needs of indoor vertical garden projects.

Indoor lights need to fit aesthetically with the environment and standard agricultural grow lights will not be appropriate due to the colour of the light produced (pink), and the design of the fittings.

Lights can be surface mounted or hung from cables. Hinged mounts are also available to allow angle adjustments.

Vicinity has developed LED grow light that are modular, pre-engineered, easy to specify, and easy to install

High end aesthetic casing allows for use in office and restaurant settings. Easy shape to conceal in a bulkhead.

LED strip lights with an angled reflector creates a “wall washing” lighting effect

Available in 600mm (~2ft), 900mm (~3ft), 1200mm (~4ft) and 1500mm (~5ft)

Supplied at 4000k with a CRI of 85
Work life of 60,000 hrs

Lights to be installed
200mm (8 inches)
above the top plants

Lights to be installed
400mm (16 inches)
away from the plant
leaves

Lights can wash a max
height of 2.4 meters
(8 ft) and provide
sufficient LUX for the
bottom plants
